

Geo-Prioritized Multilingual News Retrieval and Content Management System (With Context-Aware Personalized News Feed)

1. Region-Based News Ranking

News is ranked depending on the **user's geographic location**.

Example

- Dhaka users see Dhaka news first
- International news appears lower

2. Source Credibility Scoring

Credibility score increases when **multiple trusted news portals publish the same story**.

Example

- BBC + Reuters + Al Jazeera → Higher credibility
- Unknown site → Lower credibility

3. Personalized News Feed

Feed adjusts based on **user activity** such as:

- Clicked articles
- Reading time
- Liked topics

4. AI News Summary & Translation

System automatically:

- Generates **short summaries**
- Translates into **multiple languages**

Example:

- English → Bangla

5. Real-Time Trending Detection

The system tracks **most read / shared news** within a time window.

Example:

- Top 10 trending news today

6. Crisis Alert Based on Live Location

Users receive alerts if a crisis happens nearby.

Example:

- Flood
- Earthquake
- Political unrest

7. Follow News Portals

Users can **subscribe to specific news sources**.

Example:

- Follow BBC
- Follow Prothom Alo

Feed prioritizes those sources.

8. Location-Based Breaking News Map

Interactive map showing **breaking news by location**.

Example:

- Map pin → click → see related news.

9. Feature Name: Geographically Prioritized Search

Description:

- Categorizes search results based on user location into Local, National, and International news.
- Displays results in priority order: Local → National → International.
- Enhances relevance by showing geographically closer news first.
- Supports keyword-based search with structured result grouping.
